

## **In Defense of Liberty**

911 was a horrible human tragedy. A lot of innocent people died including first responders. Yet it is important not to let anyone use this tragedy to rationalize abolishing the Constitution and the Charter of Rights. We need to protect those documents as we protect the freedom those innocent people died for.

All these years have passed yet there remains more questions than answers. Three towers collapsed into their own blueprint at freefall speed. The only way that can happen is if the load bearing beams are blown out like in a controlled demolition. Left wing kooks or right wing conspiracy theorists aren't the only ones saying that now, experts in the field of demolition are.

Firefighters are taught to aggressively attack fires in steel framed towers because they do not collapse. We cannot respect the deaths of the first responders without examining the manner in which those towers collapsed. We owe it to their memory.

The Port Authority was denied a permit to demolish the towers because they were half full of asbestos. The first responders were exposed to that asbestos and became sick as a result.

No conspiracy theorist made up Operation Northwoods. We need to examine that document because that sinister plan was implemented on the USS Liberty. President Johnston recalled the air support for the Liberty when it was under attack by a known ally because witnesses claim he said he wanted that vessel sunk. The allies were acting on his orders.

As we remember the innocent lives lost in 911, we need to remember the innocent lives who also died on the USS Liberty. Both these sinister murders need to be addressed.
